## At Last Find Relief From ASTHMA

"After suffering from asthma a long time, I almost gave up hope of finding a medicine that would help me," writes Mr. A. Desjardis, East Drive, Coniston, Ont. "In cold, damp weather I choked, gasped and fought for breath. My forehead and cheeks turned red. I am thankful to say that I learned about RAS-MAN. It proved to be just the medicine I needed for quick relief."

Enjoy longed-for relief from Asthma, Chronic Bronchitis or Hay-Fever. RAS-MAN enables sufferers to breathe freely again, to dislodge choking phlegm. Get RAS-MAN, 50c, \$1.35 at drugstore. R-39

### Aerial duck hunter

DO you know which of the falcons observed in Canada habitually strikes down its prey only in the air? Naturalists generally credit falcons with the ability to kill birds on the wing, but the Peregrine Falcon is the superb aerialist who most often uses meteoric speed and split-second timing to effect a clean kill in the air. A supreme sportsman, the Peregrine ignores other birds so long as he is in what naturalists calling the "mooching" mood, his lazy flight period.

When the Peregrine utters a sharp, peculiarly-pitched cry, all other birds within earshot immediately scurry for cover. The hunt is on as the falcon spirals upward to gain height. At a certain level, he hovers momentarily, then dive-bombs earthward at a speed estimated to reach 180 miles per hour. The chosen victim may be a duck, a goose, or even a great heron, any of which is killed instantly, as the Peregrine strikes with closed talons, much like clenched fists. There is no trickery involved, nothing except the

tremendous aerial ability of Nature's finest piece of flight creation.

## Canadian quiz

By GEOFFREY SHAWCROSS

1. When were wireless telegraphy communications established and formally inaugurated between Canada (Cape Breton) and England?
2. Who transmitted messages to King Edward VII on that historic occasion?
3. What famous ship foundered off Cape Race on April 15th, 1912?
4. Which famous British poet was loud in his praise of British Columbia's many attractions?
5. Which part of Canada is called "the Keystone Province"?
6. Who was the first Canadian statesman to sit at a United Kingdom cabinet meeting?
7. Who founded the famous White Star Line which, subsequently amalgamated with the Cunard Shipping Company?
8. What and where is the only Crimean War memorial in Canada?
9. When was the Yukon created a separate territory?
10. When and where was our first postal service opened?

(Answers on page 27)

## NEW FREE BOOK for the HARD of HEARING

Do you now have trouble understanding folks whom you used to hear clearly? Does one ear hear better than the other? Is it hard to hear the difference between three and fifty—then and two—and life and knife or other sound-like words? Do you miss out in general conversation because you must SEE people talking to know what they are saying? Do you feel a growing suspicion that folks are ridiculing you behind your back?

If you must say "yes" to any of the above, you may already have a serious hearing loss. That's how deafness often comes—creeps up so gradually you may be quite deaf before you realize what is causing all your discomfort and inconvenience. Why take chances?

Get the facts. Write today for authoritative, new FREE BOOK about deafness and how to overcome it. It will be sent in a plain wrapper without any sort of obligation whatsoever. A postcard will do.

Illustrated — Chevrolet DeLuxe De Luxe 2-door Sedan

### Lowest-priced in its field!

Chevrolet, the Leader, is the lowest-priced car in its field. It's Canada's most beautiful low-priced car — and Canada's most wonderful motor car value!

# It'll pay you to buy Chevrolet

## ...the finest of low-priced cars!

See for yourself how brilliantly Chevrolet combines all these prize features of highest-priced cars . . . bringing you the new and finer standard of beauty, performance, comfort and safety . . . and yet it's the lowest-priced line in its field!

### A GENERAL MOTORS VALUE

#### CENTREPOISE POWER

Engine vibration and power impulses are "screened out" — isolated from driver and passengers. Flexible rides flexibly suspended between new high-side universal joints.

#### EXTRA LARGE BRAKES

Chevrolet's Junior-Luxe brakes, with their big 11-inch brake drums, apply more leverage for more stopping power. Brakes are smoother, safer, with less driver effort. Stopped linings last up to twice as long.

#### UNITIZED KNEE-ACTION RIDE

Chevrolet's famous Knee-Action ride is now even safer, smoother. New shock absorbers action smooth bumps and jolts more quickly and effectively than ever. Spring control is immediate and continuous on all roads.

#### EXTRA WIDE TREAD

Chevrolet maintains a full 54 1/2 inches between centers of rear wheels — providing a broader base to give you more stability on the road, less sway on the curves!

#### GORGEOUS NEW COLORS

Choose from a wide choice of colors and two-tone color combinations . . . the most wonderful array in Chevrolet's field. Distinctive new DeLuxe interiors are color-matched to exterior body colors.

#### EXTRA-EASY CENTRE-POINT STEERING

Control is centered between the front wheels (instead of behind the left front wheel). This advanced steering geometry makes Chevrolet surprisingly easy to steer, manoeuvre and park.

#### POWERFUL VALVE-IN-HEAD ENGINE

The trend in engines is all to valve-in-head! And Chevrolet has been building engines of this design for forty years! Teamed with Powerglide\* is the powerful valve-in-head engine with hydraulic-bushed valve lifters to give whisper-quiet power. An outstanding performer. \*Powerglide automatic transmission available on De Luxe models at extra cost.

#### POWERGLIDE AUTOMATIC TRANSMISSION

It's an oil-smooth oil-cooled automatic transmission. It's simpler with fewer parts to wear. It's smoother because oil does it all without complicated intermediate gears. Optional on De Luxe models at extra cost.

#### BODY BY FISHER

Fisher Body sets the standard for styling, for craftsmanship, for comfort and convenience! And Fisher Unisteel construction guards you with the solid strength of steel applied to steel . . . above, beneath and all around you.

#### ON "SHADE-LITE" GLASS REDUCES GLARE, HEAT AND FATIGUE

Chevrolet offers "Shade-Lite" tinted glass with exclusive, shaded windshield — testing for your extra protection. "Shade-Lite" glass all round reduces glare and heat, helps you drive more safely and comfortably. (Optional at extra cost.)

## Too many "lazy, no-goods" come when hope is destroyed

ON page 7 of this issue our readers will find an angry article on the state of the British nation by Dick Sanburn. We have reprinted it from the Calgary Herald. We commend it particularly to our readers for what it says and how it says it.

This is the best piece of angry writing we have seen in a long time. Anger, as a moving force behind editorial pens has been largely displaced by the statesmanlike approach. The thunder has gone out of the writing as it has gone out of the thinking of far too many of our journals. It has been replaced by what is called "objectivity" or the dispassionate weighing of all sides of a question and coming to timidly stated "balanced" conclusions. So it is good to run into an editor now and then who can revert to type and get mad and stay mad enough long enough to produce such a piece.

Sanburn's diagnosis of the problem of Britain, and the problem of Canada for the same virus affects us, is summed up in three words: "Too many ~~no-goods~~ lazy, no-goods." It is a crude and angry summation and is unfair to a large proportion of the British people. What it is important for us to realize is this: These lazy, no-goods are the product of a welfare state that has been growing for 50 years. It, in turn, was the product of a lazy, no-good industrial system that went to seed. So that we can better understand where we are, let's take a look at where we have been.

Contrast the attitude of which Sanburn complains with conditions of 50 years ago at the very height of Britain's greatness. Then the British workman was the world's best. When Canada wanted to man her railway shops, got skilled help to build a new country, it turned to Britain. Skilled British craftsmen came out by the thousands. This country was built and built well by the carpenters, machinists, mechanics,\* bricklayers, plasterers, painters, etc., who were masters of their trades. They were superb workers whose greatest source of pride was in the way they did their work.

What then has happened to Britain? The answer is found partly in the reason why these skilled workers emigrated by the thousands, not only to Canada but to the United States, South Africa, Australia and New Zealand. The reason was — opportunity.

The British industrial system was founded upon low wages and low food prices. When its stores of iron ore and ~~low wages~~ coal were new, Britain became ~~cheap food~~ the world's foremost suppliers of manufactures. It traded manufactures for raw materials. The fabulous profits earned were partly brought home and partly invested abroad. But by the beginning of the century, other countries,

with newer techniques, began to get into the export business. British industry was over-manned and its machinery was gradually wearing out.

British industry, instead of meeting the challenge by modernization of its methods, turned to protection at home. By the first World War, it was being challenged for markets by Germany, by Scandinavia, by the United States and the challenge of the Orient was in the making. Hence, even then, there did not seem to be any hope of advancement for the workmen who stayed home. And from all corners of the world came glowing reports of the opportunities that existed for them to use their skills as a foundation upon which to build a much better life for themselves and their families.

After the first war, a 20-year depression settled over Britain. Mass unemployment was a continuing problem, even in the 1920's. The great industrial basins of the Victorian area became the "distress areas". The mines were idle, the shipyards were idle, the steel industry was on short time. The textile trades were all but ruined by Japanese, Indian and American competition. Obsolete plants and obsolete techniques made recovery impossible. Yet British industry, particularly steel, resisted modernization as if it were a plague. Instead it demanded greater protection, and went into the organizing of international cartels to restrict production and allocate markets.

To allay unrest at home, it kept the unemployed on the dole. As more and more social services were needed, taxes got higher and the incentive to work was destroyed. During the war, Britain reverted to type. Wages were kept down, taxes were increased and billions were spent subsidizing foods so that the illusion of cheap food was maintained. After the war the Beveridge plan of cradle to grave "security" was adopted. There was no hope in Britain for people to get ahead by hard work. Instead of hope they had free spectacles, free milk, free luncheon, cheap amusement, easy gambling.

Why, then, should the miners work any harder with their obsolete equipment? The Government would grab most ~~the hope~~ of any extra income they earned in taxes. When hope for the future dies, we acquire in its place a desperate compulsion to retain what we have. On that basis, the British people have never had it better. So they make their peace with life and the shrewdest leaders of men can find nothing that will provide an incentive to lift Britain out of the terrible apathy that grips it.

Now let's look at Canada where the signs are everywhere apparent that this condition of apathy is becoming rampant. Why? Because once again we looked elsewhere in the world, saw something and grabbed at it, regardless of the fact that it

had no application in Canada. While Britain went completely overboard for the welfare state for a reason, Canada embarked on a similar programme for no reason. Britain had long since fully exploited its natural resources of coal and steel. It has no natural resources on which to build an industrial recovery. We had the world's greatest storehouse of resources and a brand new industrial plant. We had needs for all the capital we could spare for the next 50 years. Instead of harvesting it and using it, we drained it off into scores of welfare schemes. At the same time we imposed a tax load that gradually is destroying initiative.

The end result was twofold, it imposed a high cost economy upon us and prevented our real standard of living from rising as it should have, and it created in our minds the most unhealthy notion that we could live without working.

Who, in this country today, goes looking for "work"? Nobody. What we look for is "a job" which is something very different. From top to bottom, work is something to avoid, a job is something to get because it implies good pay for little effort. And everywhere there is the silly notion that all of us can go on getting more and more money for doing less and less and at the same time build a country with a high standard of living.

The truly terrible thing about the welfare state is the cloud it casts over the people's minds. We enact mea-

**Help over rough spots** sures to remedy the casual injustice of our social system.

We adopt workmen's compensation to help people injured on jobs. We adopt unemployment insurance to help people over temporary rough spots created by technical changes and seasonal unemployment. We adopt children's allowances to help provide the children of poor people with a better start in life. We adopt old-age pensions to ease the last years of those who found the going too tough to lay by enough to take care of themselves.

In short, we take steps to provide crutches for the convalesces of our social order. But when everybody is given crutches as a right, everybody acquires a vested interest in crutches — his own — and no interest whatever in the cost of the crutches to him. We become not a nation of self-reliant people standing on our own feet, but a nation of Government wards hobbling around on cheque-paper crutches.

All the normal compulsion which goes to make an industrious, frugal, self-reliant and hard-working people are removed. When the "lazy, no-good" can make out better than the industrious, where is the compulsion to do a good day's work? Where, indeed, is the compulsion to think? When pressures are created by the ever increased costs of these services on our living standards, we demand bigger and bigger Government cheques. Everybody wants more, the war veterans, the old-age pensioners, the injured workmen, the unemployed, the recipients of children's allowances. And nobody wants to do any work.

Here we come to the basic tragedy of our age. Somewhere along the line we have lost our pride in work.

**Good Enough** **Manhood** The day of the craftsman has gone. Where, today, is the man to whom the ultimate in satisfaction was not the rate *(Continued on page 6)*

# Farm and Ranch Editorials

## They howl about the effect and ignore the real cause

**W**HEN the employees of the Canadian railways presented their demands for wage boosts totalling \$150,000,000 a year our various Prairie governments made a career out of being silent. When, within a matter of a few days, the railways applied for increased freight rates that will increase the nation's cost of moving goods by \$80,000,000, the outraged protests from Edmonton, Regina and Winnipeg were instant and prolonged. If that's statesmanship, we need a new dictionary. Or we need somebody to take our politicians aside and explain to them the kindergarten rules of cause and effect.

There was once a time in the west when the railways were fair game for all politicians on the make. The practices of the railways, in those days, were certainly not designed to endear them to their customers. We had real grievances and could only obtain redress by bitter and persistent agitation. But those days with those conditions have largely passed. If we try to make any headway in our efforts to prevent disastrous increases in freight rates, then we must surely take notice of the factors that cause the increases. It would have offended the railway workers who have votes, and know how to organize them, for the Prairies to have said something about the wage demands. Yet we don't see how the politicians can stay silent on the wage issue and howl when wage boosts cause increased rates.

Railway workers are already one of the highest paid, if not the highest paid group of workers in Canada. Coming at this time the request for a boost of 45 cents an hour is surely a staggering demand. At first glance, our natural reaction would be that this is only an asking figure, set high in the hopes of getting perhaps half of it. But we have only to remember the last request which resulted, when the unions went on strike, in the employees getting just about everything they asked for.

It should be realized, in connection with

(Continued from page 4)

of pay but the completion of a good job well done? One of the commonest and most descriptive phrases current today is "good enough." Any effort that will "get by" is good enough, whether that effort is plowing a field, building a house, making a machine, editing a magazine or running a cash register. We have lost sight of an age-old and important truth, that the job whose only reward for the doing is money is not worth having.

More than a hundred years ago, Karl Marx and Frederick Engels developed the idea that every state and social order has within itself the seed of its own destruction. The seed of destruction of the welfare state or socialism is the awful apathy that infects us when we become addicted to dependence on Government handouts. Like despised drug addicts, our appetite grows each time it is satisfied. We become, in that terribly accurate phrase of Dick Sanborn's, a nation of "http, no-goods."

demands like this, that far more is involved than the people actually involved in the unions making the demand. Thousands of railway employees do not belong to the unions. Yet when wage increases are awarded, these employees are also affected. All the minor clerks, junior, intermediate and senior officials get their salaries boosted proportionately when the unions get more money. In addition, the increase given to one group of unions naturally results in similar increases later on for all other unions. Hence there is a great deal more money involved than the "mere" \$150,000,000 estimated cost of this particular demand.

The current application for a seven per cent increase in freight rates, it should be emphasized, has nothing whatever to do with the current demand for \$150,000,000. It goes to make up the deficit of the railways resulting from previous boosts and the institution of the 40-hour week. Since the railway strike of 1950, the railways have been increasing the wages of their other employees to put everybody on an equal footing. So if and when this increase is granted, the railways will be along for another 30 or 40 per cent boost in rates.

Freight rates, since the war, have risen now by around 90 per cent. For the producers and consumers of this country, nothing is as inflationary as increases in railway wages that result automatically in increased freight rates. When auto workers, or textile workers get increases that cause higher prices, we can dodge them by driving our old car or wearing our old clothes. But we can no more avoid paying the railway employees their increases than we can avoid death or taxes. We cannot do so because if railway wages go on being raised, railway freight rates must go on increasing. But like everybody else on the prairies, we don't think the railways should get their money by the flat increase system.

The damage, to us, of the flat increase is that it uniformly increases the cost of the long haul shipper because the long hauls are charged the highest rates.

Yet regardless of how the burden is placed, for too much of it comes to rest on the shoulders of the people of the West and the Maritime who are at the end of the line.

Let us, for the sake of the argument, suppose that all the increased revenue needed by the railways was obtained by increases only in the short haul rates in Ontario and Quebec. These charges are imbedded in our cost structure. They would appear first on the books of the steel mills, manufacturing plants and automobile and farm machinery makers. They only stop their momentarily for they are passed on ultimately to the consumers. In the process of being passed on, they are used as the base for the mark-up and profit of all the middle-men and dealers between the raw material and the user of the finished product. Hence a seven or 10 per cent increase in freight rates may be a 100 per cent increase by the time the consumer pays it.

So the impact of freight rate increases

upon the standard of living of the consumers on the prairie and in the Maritime is bound to be heavy. It is made doubly so by the fact that the freight is added to the price of everything we buy and deducted from the price of everything we sell.

What, then, is the solution? At the moment we'd prefer to pose that question. We are sure, however, that it helps the situation not at all for Prairie politicians to keep their backs turned when the railway workers demand more money and then howl in protest when the wage increases lead to freight rate increases. What concerns us is the end result of this sort of childishness is going to be, one of these days, a whopping boost in the Crow's Nest rates on grain. The railways are already trying to get this increase through. Another pay boost to railway workers will give them a powerful additional argument for such an increase in face of such a disaster to the producers of the Prairies, our politicians fumble with effects and blithely ignore root causes.

\*

## Could we, maybe, impound fence-busters?

**W**E were out for a drive with a visiting fireman from Winnipeg recently on what is humorously called a secondary highway in Alberta. We had to stop several times to yield the right of way to stray cows and horses. The visitor eventually protested that "you'd think there'd be a law to force farmers to keep their livestock off roads and highways!"

We thought about this the other day while scouring the byways and the bush for some horses that got loose after a yahoo from the city had driven a car or truck through the pasture fence. This has been a great berry season in Alberta, at least in our district. The Saskatoons and gooseberries are thick, almost as thick as the crowds of people who have been out on the week-ends picking them.

There will be few farmers anywhere on the prairies who will begrudge their city cousins all the berries they can pick. What they do resent is the curious fact that when city people come into the country they never bring their manners along. Rarely, indeed, do they ever ask permission to trespass on a farmer's land. They get through a fence by placing a foot on the bottom strand of wire and exerting pressure until something gives. If the shortest distance between a road and a berry patch is through a wheat field that's the route they take.

From a random sort of survey, it seems to us as if there are fewer people wandering around firing 22's this year. That's a gain. Perhaps the rash of "no trespassing" and "no shooting" signs farmers have erected can be credited for this improvement. But the berry pickers seemingly don't believe in signs. Most of them, however, seem to be inclined to pay attention to large dogs with loud barks. That is more than can be said for the duck hunters and pheasant shooters who will soon be on us again.

So on balance we don't think we need more laws to keep farm animals off highways as much as we need something to keep city animals from straying through barbed-wire fences and stock gates.

## Take It From Here

By DICK SANBORN in the Calgary Herald

THIS is going to be a thoroughly nasty column, so if you are looking for any sweetness and light today I advise you now to look somewhere else.

I am going to start off by saying some frankly unpleasant things about Britain, and I am going to wind up by saying that the same unpleasant things are beginning to apply to Canada.

One of the biggest reasons why Britain is in such a disgusting mess today is that too many of her people are lazy and selfish, and unless a lot of them pull up their socks and stop asking for handouts like gouted bums the country of which so many of us have always been so proud will have had it as surely as if our enemies had plastered the island with atom bombs.

Last week, a ship sailed from Dover to Belgium, and its departure must have filled every decent Briton with angry shame. Aboard that ship were 178 Italian miners, part of the 2,200 Italians the British government had paid a lot of money to bring to Britain to help produce more coal. Without more coal, Britain will get nowhere.

Those 178 Italians were leaving Britain because British coal miners have refused to work with them. The rest of the 2,200 will be leaving the country for the same reason. Why won't these so-called Britons work with the Italians? "They wave their hands when they talk," "They wink at the women and shampoo their hair," "They haven't learnt to talk English proper."

Do you want to know the real reason why the British miners want to get rid of the Italians? Because the British miners are lazy, and selfish, union-mad, and they know perfectly well that their own poor caricature of work would show up in all its disgraceful shoddiness when set side by side with the efforts of people who know what work is and are willing to work.

Don't talk to me about the sorry history of the miners in Britain, either, I know it. I am talking about Britain today, a Britain whose survival economically depends upon more coal, and a Britain in which the miners are the best-paid workers of all. Furthermore, nobody is making them go into the mines. If they want to get out, nobody is going to stop them.

When that shameful steamer nosed out into the Strait of Dover, it carried only 178 disappointed, bitter Italians. But it was a symbol. Unless those British miners, and thousands and thousands more semi-useless people like them, change their attitude, what sailed out of Dover was Britain's future.

A friend of mine recently received a letter from his family in England which has haunted me ever since he told me about it. His old home had been painted, his father wrote. The last time it was painted was in 1949, and it took two weeks and three days to do the job. This time, he went on, two workmen came on a Monday and were finished on Thursday, four days. And then he wrote . . . I can imagine with what pain . . . "I'm sorry to have to admit that this time the workmen were Poles . . . it was a joy to see them get on with it."

That's what's wrong with Britain. Too many lazy no-goods.

And that's what's going to be wrong with Canada one of these days, too.

Nobody who has had any experience in getting various kinds of jobs done in Canada in the last few years has to be told about how often the jobs are done in slipshod, sloppy, slapdash fashion, and how often it is almost necessary to plead with some alleged workman to do the things at all, even at ridiculous prices. How many of these people have the least pride in their work? Do they care a hoot if they do a good job or a poor job? Is it not obvious time and time again that the only interest is to get away with the least possible effort at the highest possible price? I would be ashamed, even as an amateur, to be associated with the disgraceful examples of alleged skilled workmanship anybody can see around these days.

And so the Canadian Legion yaps about foreigners taking jobs in northern Quebec, and some B.C. union yaps because American football players are said to be working on the mountain pipeline. Well, where the hell are all those vigorous, go-getting Canadians? Joining unions and looking for cushy jobs in which self-respect, loyalty, a willingness to work and pride in workmanship play no part at all.

As that steamer left England, one Italian said:

"The English were afraid we would take their work away from them. How could we? They don't do any."

Are you listening, Canadians?

### Do you remember?

... The tall oval "vases" that held artificial flowers and stood on Grandfathers' sitting-room-tables, and which you were never allowed to touch?

... The stuffed deer (or moose) head that was over the mantel, even after it got dusty and old looking, just to prove that Father, or Grandfather, or Uncle Bill, was once lucky?

# Where only the best is a bargain!

On a really tough hauling job, a truck's either got it or it hasn't. Only the best truck engineered for the job is a bargain for the farmer.

That's why you see so many Internationals on rough jobs.

That's why you will be money ahead to see your International Truck Dealer or District Office and get the best truck engineered for your job. Why not see him soon?

Check these exclusive advantages of Internationals:

- All-truck engines—built exclusively for truck work.
- The "roughest, most comfortable ride on the road".
- Super steering—more positive control, easier handling.
- Stomachs that's kept them first in heavy-duty sales for 20 years.
- 115 basic models from 1/2-ton to heaviest off-highway models.
- Service by Canada's largest exclusive truck service organization.

Model L-138 with stake body. Gross vehicle weight rating of 9,000 pounds, one of 115 basic models.

Model L-142 with combination grain and stock rack body. Gross vehicle weight rating of 16,000 pounds.

# Biggest in headaches, but biggest in sales too, was '51 - '52

By LEONARD B. NESBITT

**MANITOBA**, Saskatchewan and Alberta produced over a billion bushels of the principal grains last year — 531 million of wheat, 323 million of oats and 238 million of barley. Abundant summer moisture prolonged the growing season and the crop was late and hit by early frosts in many areas. The harvest weather was, in the terms of the sedate writers in the federal bureau of statistics, "extremely unfavorable". To apply a more earthy description, it was pure, unadulterated, blue-flame hell! It rained and then it snowed and rained and snowed again.

In the worst favored regions, many farmers never experienced a single day during last autumn when they could combine or thresh dry grain. Of course, over a stretch of 300 miles of cropland there were localities where such conditions did not prevail. The farmers there got their crops off. Others whittled away at their tough and damp grain, getting what they could off to the elevators to obtain enough cash to pay debts and taxes.

When winter set in some 235 million bushels of grain, of which 150 million bushels was wheat, remained unthreshed beneath the snow on western farms. This grain was mostly in swath, but some was in stock and some uncut. What would happen to the grain over the winter and early spring was a constant source of worry to the farmers.

Others had worries, too. The Wheat Board, viewing the promising crop in July of 1951, made substantial advance sales to importing nations. When millions of bushels of tough, damp and low grade grain plugged country and terminal elevators, something had to be done to get millable wheat into an exportable position, and that in a hurry. Customers across the ocean were waiting for the grain they had contracted for, and empty boats were swinging in harbor docks.

To bring order out of threatened chaos, a transportation authority was appointed by the federal government — R. W. Milner, a member of the board of grain commissioners, with W. J. Fisher, a civil servant trained in transportation problems, as his assistant. The out-of-condition grain was left in elevators and the better grades given the right of way to port terminals. Alberta's crop was the worst damaged and quite a volume of Saskatchewan wheat was railed through to Pacific ports to fill waiting ships.

The quota system of marketing, inaugurated in World War 2, and with which the west is well acquainted, helped to allocate the comparatively small available space in country eleva-

## Kenny's Rabbits

Mrs. Charles Dyer, Carleton Place, Ont., sent us this picture of her grandson, Kenneth Erickson, having fun with his pet rabbits.

tors among the grain producers, but at only too many shipping points no space whatever was available for many farmers.

The tough and damp grain stored in farm bins worried the producers for fear that it would get out of condition. Wheat which has a moisture content of over 14.5 per cent is tough and over 17 per cent is damp. This water-soaked wheat was a nightmare to the Wheat Board, the grain commissioners and the elevator companies, as well as to the farmers, until the spring of this year.

Usually the great bulk of western wheat is harvested in a dry condition but there is always a certain amount of tough grain, varying in quantity with the years. To recondition this grain, driers are provided at terminal elevators and most years in the past such facilities have been able to handle the situation satisfactorily. But in the 1951-52 crop year 275 million bushels of tough and damp grain, of which 225 million was wheat, were delivered by farmers, mostly during the autumn and early winter. The terminal drying facilities were completely swamped.

### Weather Danger

Warm weather will quickly spoil tough and damp wheat, but the danger is minimized during the cold Canadian winters. The great dread last winter was that sufficient grain could not be dried before spring and extensive damage would result with the advent of warm weather. Definite action had to be taken, and quickly. The existing driers were worked night and day and finally did dry some 100 million bushels.

Tough grain was shipped to Duluth, Superior and Buffalo in the U.S.A., and 14 million bush-

els conditioned there, but the outstanding achievement was the persuading of overseas customers to buy tough wheat. Europe took 100 million bushels, with the British buying the bulk of that supply. That was a relief! One cargo of tough wheat transported out of Vancouver via the Panama to the United Kingdom in somewhat the nature of an experiment, is reported to have arrived at its destination with the wheat in a dry condition.

The next item on the agenda of worries was what the weather would be like in the spring. There was quite a bushelage of tough grain in farm bins and all that unthreshed stuff on sodden fields. What if April and May proved to be wet months? That was a haunting nightmarish thought! But Dame Nature, so unthoughtful during the previous autumn, turned a smiling face to the west and hardly enough rain fell in April and May to wet a tarpaulin. Dry breezes fanned the western fields and most of the crop was cleaned up with little loss and as dry as flint. The need for aspirin vanished with the dry weather!

The month of July passed into history, marking the end of one of the most eventful crop years in the annals of prairie agriculture. Let's see what has been done. At a guess, around 700 million bushels of all grains have been delivered to the wheat board; about 500 million bushels of wheat, oats and barley have been exported, creating a new record for Canada. The previous top figure was 460 million from the lush crop of 1928.

There have been no complaints registered this past year by buyers on the grades of Canadian grain. Quite substantial quantities of feed wheat have been disposed of. Markets have been found for 5 and 6 wheat in Germany, Belgium, Japan and other countries. Such grades were considered unfit for milling in Canada.

Those who have consistently opposed the Wheat Board method of marketing over the years must admit that George Melvor, chief commissioner, his assistants, Bill McNamara and Bill Riddell, and the competent Board staff, did a grand job of marketing western Canada's grain during the past twelve months. They took a huge, unwieldy, badly damaged crop and really merchandised it without holding a bargain sale. If dependence had to give place on the speculative market for the disposal of such a volume of grain in the condition in which it was, it is a sure thing that grain producers would have taken a licking such as they haven't experienced for over twenty years.

#### Credit for All

All the credit should not go to the Wheat Board, however, and the grain commissioners, railways, steamship lines, wheat pools, line elevator companies and flour millers worked with wholehearted co-operation to avert what for a time seemed like a major tragedy.

All is not clear sailing ahead either. There is now about 150 million bushels of grain in store in western country elevators, 33 million bushels of which is in Alberta, and most of it is low grade. When the new crop starts to roll the better grades will have to have the right of way. Marketing quotas will be small, probably 5 bushels to the acre to start with; the carryover will be substantial. Some farmers have not been able to get rid of their 1951 crop surpluses, and the 1951-52 Pool closed July 31st.

But the people who did a splendid job in the handling and sale of the 1951 crop will surely be able to do equally well with the 1952 crop. Let's hope it will be a lot easier than during the last crop year. Surely after two years of bad harvest weather things will take a turn for the better this year!

#### The Statistics

Federal bureau of statistics estimates:

	Prairie Provinces Production	
	1951, bus.	1950, bus.
Wheat .....	531,000,000	427,000,000
Oats .....	323,000,000	254,000,000
Barley .....	238,000,000	157,000,000
Delivered by Farmers		
	1951-52 estimated	1950-51 actual
Wheat .....	460,000,000	423,100,000
Oats .....	130,000,000	114,500,000
Barley .....	120,000,000	115,000,000
	710,000,000	652,600,000

#### Exports

	1951-52 estimated bus.	1950-51 actual bus.
Wheat .....	350,000,000	341,000,000
Oats .....	75,000,000	35,000,000
Barley .....	75,000,000	23,000,000
	500,000,000	399,000,000

#### 1951-52 Crop Years

Wheat delivered tough and damp .....	225,000,000
Coarse grains delivered tough and damp .....	50,000,000
	275,000,000

## "What will I be doing at 60?"

"I'm a farmer's wife and still young — but I know what I'll be doing at 60. The children will be grown up, and John and I will take a well-earned holiday — a permanent one. Our Mutual Life retirement insurance takes care of that!"

You and your husband can start today to set aside a regular sum within your means . . . and begin to reap its harvest in a welcome monthly income when you are ready to retire and take life easy.

Call it saving, if you like. It's more than that. A Mutual Retirement Income Policy also gives invaluable financial protection from the moment the policy is started . . . protection that may mean your ability to keep your home intact and to properly educate your children . . . should the unexpected happen.

Find out how Mutual Life insurance can take care of your family's needs!

## The implements are all okay; it is the users who are wrong!

By JOSEPH PAUL

ALTHOUGH a craftsman may surround himself with good tools, it is not through that fact he gains distinction. He becomes a "master" by virtue of the skill with which he uses each piece of equipment. In a previous article the discussion centered on a basic list of tillage implements. While some are busy arguing the list was not long enough; others will maintain they can do a good job of farming with only a few of the items mentioned. Which is nearer the truth?

Consider the use of the one-way. No other implement is at one and the same time so much used and so much abused, so popular and in such disrepute, so adaptable and so difficult to operate.

Some good farmers are getting along almost exclusively with the one-way, others have chosen to get along without it. What are the real capabilities and limitations of this machine?

One farmer continues to operate his land in narrow strips, working with the one-way. The earth is thrown toward the centre every other time and the fields are kept flat and even. A neighbor claims it is not practical to do this as the one-way will not turn short toward the tilled side. The first farm is laid out with wide grass headlands which make turning either way quite feasible. The neighbor's farm has no way of using grass, so the system doesn't suit.

One farmer works his land as wet as possible and another delays tillage as long as he can without having the weeds go to seed. The first one doesn't find that discing injures the soil, but the other one says the disc pulverizes the soil and "there

ought to be a law against it."

One farmer does his deepest tillage at the start of the summerfallow season and has a firm shallow seed bed by the next spring. Another goes shallow during the summer and decides to do a real thorough job at seeding time.

There is no absolute right or wrong in farming, but if a person wants to use the one-way to advantage, the first operator in each of the examples above appears to be on the right track.

There are ample grounds for differences of opinion based on experience with the one-way; but regardless of individual preferences, the disc plow or one-way remains the most suitable implement for tillage under extremely heavy trash conditions, and for breaking heavy soil at a fairly high moisture content.

Along with the disc, the diamond or drag harrow has received more than its fair share of blame for the soil drifting of the thirties. The name drag harrow was unfortunate and may have suggested part of the abuse of this implement. Lever harrows were often operated with the teeth slanted or almost flat. This resulted in the crossbars catching the surface soil and really acting as a drag; tending to pulverize all the surface soil and leaving the dusty particles on top.

Fortunately such use of the harrow seems to be pretty well a thing of the past. It is regaining respectability as the only implement which can be used as a packer immediately following the one-way or duck-foot cultivator.

With the teeth set straight, the harrow can do a good job of subsurface packing, leaving the small clods on top, and pulling, rather than transplanting, the

small weeds which have been loosened in the moist soil by the other implement.

But in spite of the excellent use some people make of this harrow, there are many who prefer to get along without it, and appear to do so quite successfully.

Shovel cultivators of the duckfoot type became very popular in the drier parts of the plains in the late 'teens and early twenties. Their popularity was temporarily eclipsed by the one-way; but the duckfoot is gradually returning to a more stable use. It is unfortunate that its operation appears to be so simple. Anybody can pull the trip rope and let the shovels into the ground; then as long as they stay under the surface and the whole thing doesn't ball up with trash there appears to be nothing to worry about.

The same false simplicity is common to "blade" cultivators. Shovels running too deep at the nose or at the wings don't appear to present any problem, but they may increase the draft as much as 20%; the blades or shovels may last only half as long as they should; and sometimes such poor adjustment causes failure to clear the trash.

The job looks just the same on the surface whether shovel wings are sharp or worn off round; but the weeds will escape these rounded tips unless the overlap is increased accordingly. The job looks about the same whether the shovels are running three inches deep or five inches; but the five-inch depth does not always fit the purpose; especially if it happens to be pre-seeding tillage.

The rod weeder is another good sub-surface tillage implement which had to suffer a temporary eclipse from the one-way. Like the duck-foot it is staging a modest but sound comeback. The most common misuse of the rod weeder occurs when a suitable depth of tillage has not been previously established by another implement. The rod weeder needs to run at a depth which will keep an even layer of soil coming over the rod, or it will push the surface soil and pulverize it badly. It cannot be used to the exclusion of other implements; but under proper conditions it is an effective weed killer, and it is an excellent sub-surface packer, — especially when used before seeding on land which has been worked too deeply.

The blade is becoming a great favorite with those who are using trash cover as a protection for the soil. Especially where the land is summerfallowed every other year; this type of tillage appears to be the only effective way of retaining the trash cover from one crop season to the next. In some cases the blade is being used for tillage of stubble immediately following harvest, and it is the only im-

made to assist the plants to grow. These would be in the form of fertilizers and insecticides. The use of these would be in the form of spraying the plants with a solution of the insecticide. This would be done at the time of planting. The use of fertilizers would be in the form of applying them to the soil at the time of planting.

#### Control of Disease and Pests

There were numerous diseases attacking the plants and the insects which caused them. The farmers to be seen were using a variety of methods to control the diseases and insects. Some of the methods used were the use of insecticides, the use of fungicides, and the use of antibiotics. The use of insecticides was the most common method used. The use of fungicides was also used. The use of antibiotics was used in some cases.

What does *your* handwriting reveal?

Charming people have charming hand writing

Handwriting is a reflection of the mind and the heart. It is a language of its own, and it can tell us much about the person who writes it. The way we write our letters, the spacing between words, the slant of the lines, all these things can reveal our personality, our emotions, and even our physical health.

For example, a person who writes in a clear, straight, and well-spaced manner is likely to be a person who is organized, logical, and reliable. On the other hand, a person who writes in a slanted, shaky, or cramped manner may be a person who is emotional, impulsive, or perhaps even ill.

There are many other factors that can influence our handwriting, such as the type of pen we use, the surface we are writing on, and the time of day. But no matter what the circumstances, our handwriting is always a reflection of who we are.

¶ I have power to bind and loose ye, that ye, why will ye be bound? And if you think thus

Figure 1 consists of two side-by-side grayscale photographs of a person's face. The left photograph shows the person with a neutral expression, looking directly at the camera. The right photograph shows the same person with a slight smile, revealing their teeth. The images are used to illustrate the concept of a 'smile' in the context of the study.

Jeŕovah and they wa- + = + + +  
sentence of death.

expressed by sympathy. I have been left with a heavy heart, and when I look back on the life of this man, I am filled with a sense of loss. He was a man of great courage and a man of great faith. He was a man who was always ready to stand up for what he believed in, and he was a man who was always ready to help others in need. He was a man who was always ready to give of himself, and he was a man who was always ready to love. He was a man who was always ready to live, and he was a man who was always ready to die. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

The Capitalist view of life is that of a man who is always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

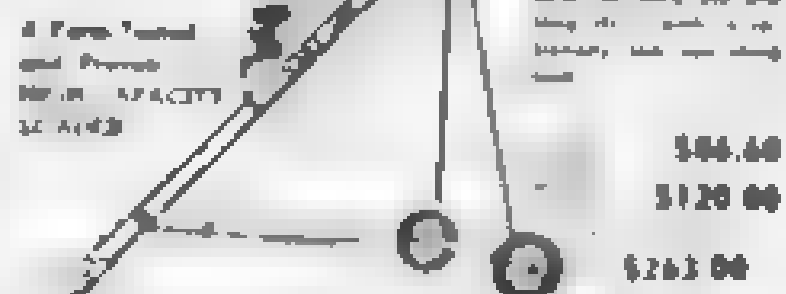

He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man. He was a man who was always ready to be a man, and he was a man who was always ready to be a man.

## The world watches Eisenhower, but his election is uncertain

By BEN MALKIN

FEW election contests have ever aroused such world-wide interest as the one so he-named States his year unless perhaps it was the election of 1844, when the U. S. was not in the war, and when its pre-war decisions would help determine world history.

After the Republican nomination of Dwight D. Eisenhower as their candidate a great many people abroad breathed a sigh of relief that his extreme isolationist had been nominated away from Senator Taft, who is reputed to be an isolationist. Many now feel that as far as American foreign policy is concerned it does not matter now whether the Republicans or Democrats are elected.

But it does matter. Eisenhower is elected, a fundamental change in policy would be indicated. Policy would still be based first on containing Russia and on keeping her

opportunities for expansion of her power and second, of making the offensive in the cold war by trying to win over countries he sees as still neutral to the Western alliance, and in trying to split Russia off from its own allies. But with the Republicans in office here would likely be a shift in emphasis. Despite Eisenhower's close knowledge of Europe and the USSR, to strengthen his continent here might well be a shift from helping Europe to helping Asia and from giving more economic aid to giving more military help.

### The Party's Power

Eisenhower cannot, after all, split himself off from his own party. A very strong wing of his party still thinks his the way to fight Communism in Asia is to fight China, and they would use Chiang Kai-Shek, whom not only the Chinese Communists but a great many others detect as overruling the Chinese Communist govern-

ment. The Democrats successfully resisted the terrific pressure in the United States for such a course. Whether Eisenhower could do it when the pressure came from his own party is another question.

The danger of such a measure is of course that it would first alienate a large section of Asia, including India, which would very likely consider an attack on China at his time as an attack on Asia itself. Secondly, as the British and French fear it would get the United States so bogged down in China's fruitless spaces that nothing would be left for Europe, which would be left so weak as to be unable to resist the Russians.

### What About Tariffs?

On tariffs, too, what Eisenhower wants and what he may do are two different things. He himself is a low-tariff man, and would no doubt like to continue the policy of reciprocal trade started by President Roosevelt in the 1930's. But with a protectionist-minded Republican Congress behind him, could he resist the pressure? Even under the Democrats who are far more committed to low tariffs than the Republicans are here has lately been a marked tendency toward closing American doors to foreign goods where these compete directly with U. S. interests. Is the administration doing this, what is to be expected from the Republicans?

Not so, Eisenhower is our man because President of the Republicans. It was a majority of voters in Congress. The Democrats have some of the strongest expert economists, political, foreign policy, in the world in their ranks. A great many of them have improved our country under the Democrats. Under the Democrats, with all the faults, the United States is probably more goods per capita a considerably more and moving more rapidly than the country has ever known. This must inevitably show up in the voting.

In the last election, the Republican candidate, Mr. Dewey, was blamed for a one too much. His more conservative supporters said his was the reason he was defeated. He tried to be as liberal as he felt comfortable, but he felt uncomfortable. He was nearly defeated enough. A number of commentators like Walter Lippman, David Lawrence and the Associated Press all seemed agreed on this.

### Not Enough Terms

There is every likelihood that Eisenhower will find himself in the same boat as Dewey. There simply aren't enough conservative Republican votes in the U. S. to win the election. Unless Eisenhower can convince a fair portion of the public that he stands for liberal policies, it is hard to see how he is going to be elected. Likeable as he may be personally

## "Following the Clean"

The co-operative movement is the application of democratic methods to business practices. In preference to profit-making corporations, co-operation offers services at cost.

Co-operative principles call for business efficiency, economy, and a fair rate for every man, woman and child. Co-operation does not exist in law or form. It grows in the minds and hearts and purposes of people. It is founded on justice, trust, and confidence. Its high ideals attract thoughtful, forward-looking people.

The Alberta Wheat Pool is a co-operative organization, organized by the farmers in the province. Its progress proves that its affairs have been conducted efficiently and economically. The Wheat Pool has closely adhered to the co-operative principles. It requires and deserves the active aid and support of a larger number of farm people.

"It's ALBERTA POOL ELEVATORS for ALBERTA FARMERS"

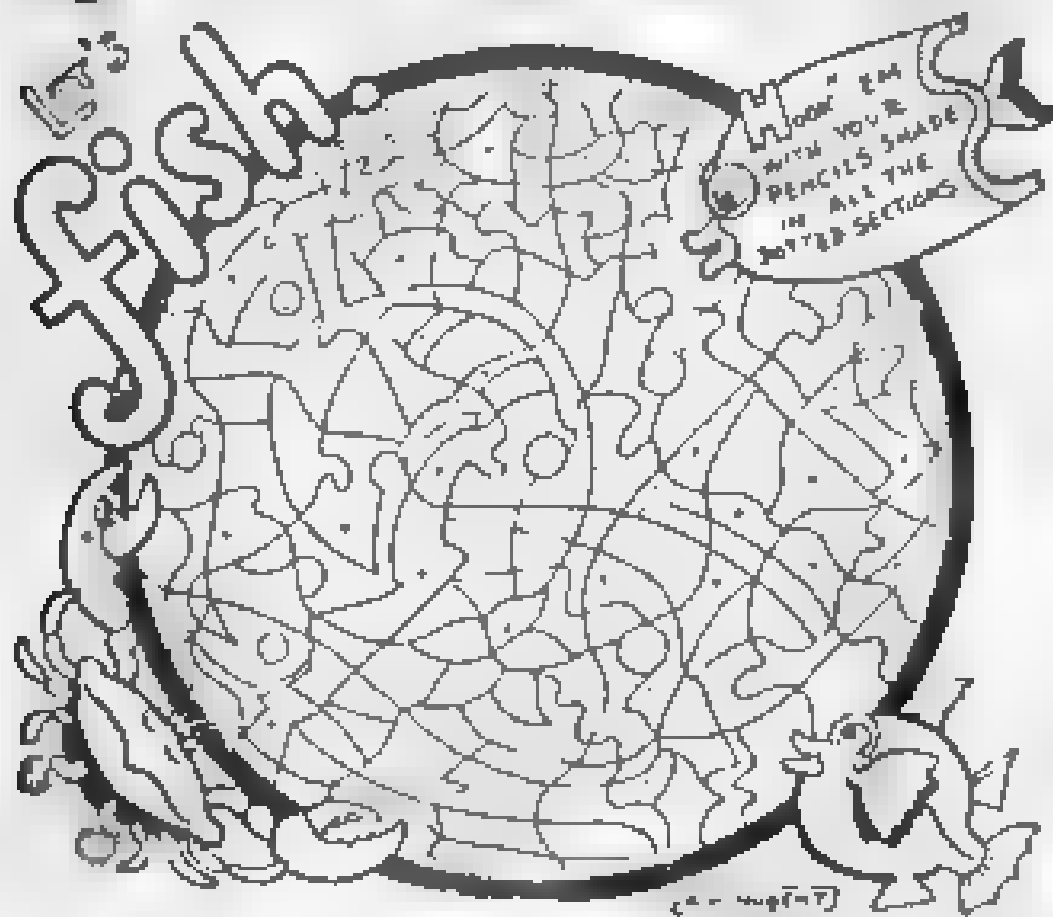

"It's Alberta Pool Elevators For Alberta Farmers."

# CANADA PACKERS LIMITED

## REPORT TO THE SHAREHOLDERS

The 25th Annual Meeting of the Shareholders of Canada Packers Limited was held at the Hotel Vancouver on May 15th, 1952.

Boxing Receipts—New High		\$290,000,000
First Receipts—First of Year	\$250,000,000	
Throughweight of products sold—New High		200,000,000
Previous High Throughweight	1,800,000,000	
Net Profit—Total		\$ 361,545
after Depreciation	\$ 157,700	
" Income Tax	1,300,000	
Contribution to Employees' Retirement Plans	180,000	
	\$ 183,000	

Management is pleased with the results. Net Profit was a record for the last year of the company.

In the last year of the department, 1951-52, net profit is a record of sales with a profit of 1%.

Net Profit in 1951-52 was a record of sales with a profit of 1%.

Because of the high price of cattle, the company has been able to enter the market in the last year of the company. For several years, the company has been able to enter the market in the last year of the company.

The company's profit in the last year was due to a record price decline and a record production level.

The following table sets up the record by month of the company.

TABLE I  
AVERAGE MONTHLY PRODUCTION OF CANADIAN PRODUCE  
April 1951 to March 1952

	Beef	Pork	Chicken	Wool
April 1951	37,000	12,000	32,000	40,000
May	38,000	13,000	33,000	41,000
June	39,000	14,000	34,000	42,000
July	40,000	15,000	35,000	43,000
Aug.	41,000	16,000	36,000	44,000
Sept.	42,000	17,000	37,000	45,000
Oct.	43,000	18,000	38,000	46,000
Nov.	44,000	19,000	39,000	47,000
Dec.	45,000	20,000	40,000	48,000
Jan. 1952	46,000	21,000	41,000	49,000
Feb.	47,000	22,000	42,000	50,000
March	48,000	23,000	43,000	51,000

The company's profit in the last year was due to a record price decline and a record production level.

However, there is a record of the company.

In 1951-52, the company's profit was a record of sales with a profit of 1%.

In fact, the company's profit in the last year was a record of sales with a profit of 1%.

TABLE II

	Throughweight	Sales	Average Price per lb.
March 1951	1,800,000,000 lbs.	\$330,000,000	18¢
March 1952	2,000,000,000 lbs.	\$360,000,000	18¢

The company's profit in the last year was due to a record price decline and a record production level.

The company's profit in the last year was due to a record price decline and a record production level.

Though both programmes are somewhat helpful to reduce and though some are signs of a record price decline and a record production level.

On the other hand, the company's profit in the last year was due to a record price decline and a record production level.

The company's profit in the last year was due to a record price decline and a record production level.

Price of the company's profit in the last year was due to a record price decline and a record production level.

Price	Price	Price
1951	1952	1953
1954	1955	1956
1957	1958	1959
1960	1961	1962

The company's profit in the last year was due to a record price decline and a record production level.

Although the company's profit in the last year was due to a record price decline and a record production level.

It will be noted that the company's profit in the last year was due to a record price decline and a record production level.

The company's profit in the last year was due to a record price decline and a record production level.

Canada's production of meat in the last year was a record of sales with a profit of 1%.

In the last year of the company's profit in the last year was due to a record price decline and a record production level.

The company's profit in the last year was due to a record price decline and a record production level.

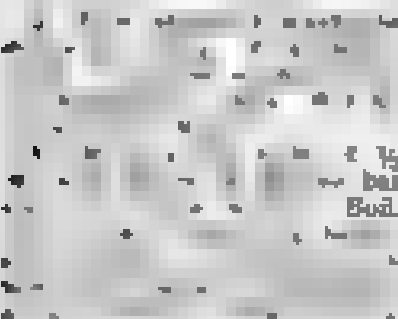

Except as otherwise stated.

The company's profit in the last year was due to a record price decline and a record production level.

The steps taken were:

- A record price for the company's profit in the last year was due to a record price decline and a record production level.
- The company's profit in the last year was due to a record price decline and a record production level.

## Let's Ask Aunt Sal...

Dear Aunt Sal, I have a question about the recipe for the Sunshine Cake. I am not sure if I should use the recipe for the cake or the recipe for the frosting. Could you please clarify this for me?

## Make helping with baby a pleasure

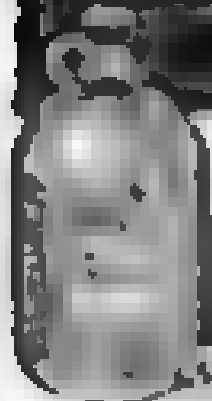

By Mary Perry, M.D.

It is a pleasure to help with a baby. The first step is to make sure the baby is comfortable. Then, you can help with feeding, changing, and soothing the baby. It is important to be patient and gentle when dealing with a baby.

### Sunshine Cake

Ingredients:

1 cup butter, softened

1 cup sugar

2 eggs, beaten

1 cup flour

1/2 tsp baking powder

1/2 tsp salt

1/2 cup milk

1/2 cup raisins

1/2 cup nuts

1/2 cup coconut

1/2 cup chocolate chips

1/2 cup vanilla extract

1/2 cup lemon juice

1/2 cup orange juice

1/2 cup apple sauce

1/2 cup banana

1/2 cup peach

1/2 cup cherry

1/2 cup raspberry

1/2 cup blueberry

1/2 cup strawberry

1/2 cup blackberry

1/2 cup elderberry

1/2 cup mulberry

1/2 cup fig

1/2 cup date

1/2 cup walnut

1/2 cup pecan

1/2 cup almond

1/2 cup hazelnut

1/2 cup cashew

1/2 cup pistachio

1/2 cup macadamia

1/2 cup Brazil

1/2 cup pine

1/2 cup coconut

1/2 cup vanilla

1/2 cup lemon

1/2 cup orange

1/2 cup apple

1/2 cup banana

1/2 cup peach

1/2 cup cherry

1/2 cup raspberry

1/2 cup blueberry

**ROGERS  
GOLDEN  
SYRUP**

**AUGUST**, stately, regal, named after Emperor Augustus, who called it his "lucky" month. He bore the impressive name of Augustus Calus Octavianus, and succeeded Julius Caesar, whose month was July. Augustus was a beneficent and powerful ruler, a patron of learning — the Augustan age is still held among the most memorable in history. It is felicitous that the name of August should be given to the harvest month of fulfillment, when Nature's gifts are so proudly bountiful. The wise old Roman chose his month well.

Now in the August farm scene heat waves shimmer over the ripening fields; crickets chirp all over the place; golden-rod in bright patches is mingled with white Queen Anne's Lace and Black-eyed Susans. Big husky thistles in royal purple stand upright by fence and gate; clumps of pale-blue and white asters lighten the brown grass. The barley has a beard, the wheat is deep yellow, the oats are still silvery green, and the whole prairie landscape of field and garden, happily escaping storm disaster, wears the look of contented fulfillment, for this is August, and August is the reason for May's sowing.

## Country Diary

Awakening at the usual early hour, we miss the dawn-chorus which was such a spectacular performance in May, and realize again that these are the "silent days" when few birds sing. There is no reason why they should. Bird-song belongs chiefly to courtship and the nesting season, and this is the half-way period, the happiest time in a small bird's life when a family with its attendant worries is past and forgotten, and feed is abundant and at hand. Why should it sing? It is well content to browse in peace and let the warm still days float by. Though song, to us, is a sign of happiness, it is not necessarily so with birds. The blackbird and meadow lark are not moping since they changed their lovely notes of music for a flat-sounding chirp. No wand then, however, against a background of comparative silence, a sudden little scrap of music from the wren, or a muted trill from the sparrow strikes the ear with unaccustomed loudness.

During the night the weavers

are at work. With amazing rapidity they spin beautiful intricate patterns with fine, fine threads on fences and bushes, which when made visible by sun-lit dewdrops contribute to the beauty of early August mornings, adorning fence wires and tall grasses in filigree of silver. Nothing else in Nature, not even the clever nests of birds can compare with a spider's web for intricacy of construction, all the more wonder-

ful because its making is instinctive and not the result of reasoned thought. The framework is so delicate, yet so effectively firm and sensitive to vibration that it will respond to the slightest tremor of a captured fly, and strong enough to remain unbroken in the wind and to bear the weight of heavy drops of dew. Of course the lovely thing is a trap of Nature's devising to provide food for the creative artist spider by intercepting the flight of possible victims.

Here's hoping that the promise of August brings reward and happiness to us all.

## The Dishpan Philosopher

I DON'T believe there is for me a place where I would rather be than here where summer's cloudless sky, so deeply blue, so wide and high, is spread above the rolling plain, where boundless fields of ripening grain begin to show the gleam of gold by which fall's coming is foretold. Before the beauty of the scene the harried spirit grows serene, and common sorrows of mankind refuse to linger in the mind. Unrest that through the world holds sway seems very faint and far away from these pale golden seas that swell with promise all shall yet be well.

Yes, here my home and here my hearth — I crave no other spot on earth. To walk with Nature, hand in hand, her moods to watch and understand, and help a hungry world to feed — that is the life I know I need.

## Aunt Sal suggests . . .

**T**IME after time you good readers write me that I seem like a real friend to you. Thank you . . . and the same goes for you too. So many of you do not wait until you wish to ask a certain question, but you delve into your own fund of experience and voluntarily offer help to others. That is the spirit I admire. So many of you acted that way during the past month that I believe I could fill up several columns of your fine hints and thoughts.

Here are some I'd like to especially share with you.

Mrs. G. W. from Kelowna (see other column) writes that she thinks this page should be named "The Home Lovers' Club . . . edited by Aunt Sal". Thank you for that suggestion, but I think we'll retain the same old heading at top, but we can adopt the spirit of that other title . . . can't we?

Mrs. A. H. of Calgary says she thinks she can help Mrs. R.H.W. of Clanwilliam, Man., who had trouble with the bag of the vacuum cleaner. Mrs. H. said she had a similar experience with her cleaner and found out it was not in the bag but in the hose that had become jammed with some hard matted fluff. This made the motor overheat and retarded the suction action. She took her cleaner outside and stuck a piece of wire through the hose and out came the hard fluff and now all works well again!

Mrs. E.A. of Arborfield, Sask. writes in asking if we have got any definite information about making flowers out of milk filters. (This is a question of long standing) and if I've seen those made of colored kleenex. Yes, at last I've been able to get a bit of help on the milk filter posies. They and the kleenex ones are made by folding the goods into large squares, then folding it into accordion pleats and binding the centre with wire and fastening it hard

in centre. Then the petals are cut along outside edge to simulate edge of flower petals. Those I saw were really lovely. Looked like Gardenias.

But the most beautiful hand made flowers I've seen are those made of old nylon stockings. I was privileged in meeting the lady who had carried off all the prizes in this class in the Lethbridge exhibition this summer and she showed me her wonderful collection and gave me much information about making them. She says the sheer hose makes the best ones. They have to be boiled in dye remover, then in bleach and sudsey water . . . then dyed and then comes the real work of marking them up into bouquets and corsages that almost rival Nature's own. I was hard put to choose one to adorn my coat for they were all so perfect. This lady (Mrs. J. S. of Lethbridge . . . a retired farm lady) has these for sale so if any of you are interested just write me and I'll give you her name and address.

**W**HEN it comes to the question of cakes, most people find it difficult to decide which they like the better—chocolate cake or coconut cake. The happy way to solve this problem is to have both . . . in one delicious Coconut Fudge Cake!

Next to the wonderful taste, the thing we like best about this recipe is that it can be made with your favourite cake mix. When you frost it with chocolate icing and heap on the coconut, you'll have a taste-tempting Coconut Fudge Cake in all its splendour . . . a truly luscious finale to any meal.

### Coconut Fudge Cake

Empty contents of a package of chocolate cake mix into a mixing bowl; fluff with fork. Measure out 8 oz. water (one complete cup). Add half the water (4 oz.) slowly, mixing smooth after each addition. Batter will be thin. Pour into two 8" layer cake tins lined with waxed paper. Bake in moderate oven (350° F.) for 30-35 minutes. Cool 5 minutes before removing from pans. Frost cold cake with chocolate icing and sprinkle with coconut.

**Chocolate Icing**  
5 tablespoons butter  
1 lb. (3½ cups) confectioner's sugar  
2 squares (2 oz.) unsweetened chocolate  
8 tablespoons milk (approx.)  
Few grains salt  
1 teaspoon vanilla extract  
Cream butter. Sift sugar and add gradually, creaming constantly. Add enough milk to make mixture the proper consistency for spreading. Add melted unsweetened chocolate. Add salt and vanilla extract. Quantity: filling and frosting for two 8" or 9" layers.

Bye by for now . . . and every good wish.

Aunt Sal

## Painting made easy

By LOUISE PRICE BELL

**T**O aid in the task of mixing paint, turn your paint can upside down (be sure the lid is on tightly) for 24 hours or more.

Save your old nylon stockings and strain paint that has become scummy. It will be smooth again, and ready to use.

Try pasting a paper plate to the bottom of the paint can and you will eliminate unnecessary mess. Another good tip to keep paint from running down the outside of the can is to put a strong rubber band lengthwise around your paint can. Use the band to wipe excess paint from your brush, and the outside of your can will remain bright as new.

Do you ever wonder how much paint is remaining in a particularly used can? Paint a line on the outside of the can at the top level of the paint, and you can tell the amount of paint inside as well as the color, without opening the can.

Painting woodwork is often difficult because of door-knobs, hinges, locks, etc. Instead of removing these, put a coating of vaseline on them and any paint that happens to overlap can be easily removed.

An old pair of socks will come in handy when you are in the process of painting. Slip them on over your shoes and not only will they protect your shoes, but you can easily remove any paint that drops on the floor . . . and without stooping over to do it.

Have you ever tried to paint drawer handles which you have had to remove from the drawers because you want them a different color? You will find the job is simple if you screw each handle into a stiff piece of cardboard. All you have to do is hold the cardboard and paint to your heart's content.

Make your flower pots bright and new looking by turning them upside down over a tin can and brushing on your favorite colors. The can will act as a stand and may be turned as the pot is painted, thus protecting your hands and the pot. The pots should remain in this position until dry.

## When there's a baby in your house

By Louise Price Bell

**T**HERE'S a baby in most of the homes of the people who are reading this, and so everyone knows the joy that the tiny bits of humanity brings! Young parents too often fuss about the baby, though, instead of leaving him alone to discover all the interesting things in the world about him. The less a baby is handled the better he is, physicians tell us. That doesn't mean they shouldn't be held, and cuddled and loved, for psychologist and educator alike claim that babies who have no affection do not develop as well

as those who do. In one large orphanage for instance, there is a certain period in the day that the babies are taken out of their cribs and held, talked to, smiled at, and made to feel someone cares for them. The Spartan mother wouldn't do that, and her baby would miss much.

When the child is starting to investigate things, let him do it in his own way even though you could show him plenty of "short cuts". It is by investigating that he learns and too much parental, or brotherly and sisterly help can do more harm than good.

# OWNERS TELL YOU!

**HOW CATERPILLAR  
SAVES MONEY ON  
THE FARM!**

(Above) "Remarkable!" says Mr. L. H. Campbell, of Campbell Bros., Arvonia, Pa., owner of a 43-h.p. "CAT" D4. He goes on to say:

"No other machine its size could do this kind of work." You'd say the same if you saw how he used it, with ditcher attachment, dredging sloughs.

(Below) Mr. G. B. Struck of Beckert Bridge, Ala., reports on his "CAT" D4:

"It has worked over 12,000 hours in the past 10 years, discing, seeding, and pulling 100' 16' plows. Average diesel fuel consumption is 1 1/2 gallons per hour. Steering and master clutch have never needed repairs, and link assemblies and track rollers are still in A1 condition."

(Above) "You can't beat 'CAT' D4 economy!" asserts Mr. Albert Anderson of Hilda, Ala.:

"I just finished seeding 30 acres of oats with a 12-foot press drill on only 15 gallons of diesel fuel. That's 4c per acre! Gas tractor owners won't believe how little fuel a D4 uses!"

(Below) "Repairs? Not one in 5 years!" says Mr. Jerome Bechard, Laford, Pa., of his "CAT" D4 purchased in 1947.

"What's more, I can seed and till 100 acres a day at a diesel fuel cost of less than 5c per acre! That kind of economy means bigger profits!"

(Above) Master Farmer Emil Cammerot of Rockyford, Ala., a constant "CAT" user since 1920 has this to say about his 32-h.p. D2:

"Working in 4th gear with a 15' disc harrow, the D2 enables me to seed about 60 acres a day. Economy? Yes, diesel fuel consumption of 2 1/2 gallons per 14-hour day is what I call economy! And," adds Mr. Cammerot, "our D2 was a 'life-saver' in the fall of '51 when wet conditions put operations at a standstill elsewhere!"
